

Jueni Biashara AI - Product Overview

Version v1.0 | 2026-07-24 | Public overview

Public summary for evaluation. It is not an executed agreement, a warranty, or a certification. Final scope, controls, residency, and terms are defined in your order form, data-processing agreement, and counsel-reviewed contract, which control over this document.

01

What it is

Jueni Biashara AI is business-operations software with governed AI assistance. It is not a payment bot and not just another chat window. It brings your whole working day into one clear place, so you know who paid, what sold, what is left, and who to follow up - before you lock the door.

02

The working day it holds together

- Money - invoices, collections, payment follow-through, reconciliation, and management evidence, prepared for review.
- Stock and operations - reorder signals, owners, supplier context, receiving, and exceptions.
- Customers - qualified interest, follow-up, commitments, and support, kept moving to a clear next step.
- Management - a concise view of what moved, what is stuck, what was decided, and who carries it next.

03

How work moves

Every part answers the same plain questions: where did this work come from, who owns it, what happens next, who signs it off, and what record is left behind. Work moves in disciplined steps - capture the record, prepare the draft, review the action, approve the decision, keep the evidence.

04

Tiers are maturity bands, not feature checklists

Public list prices are in Kenyan Shillings. The tiers describe how much of your operation is running in one place:

- Mwanafunzi (KES 15,000 / month) - core finance, customer, task, and record workflows for a small team.
- Fundi (KES 45,000 / month) - broader team operations.
- Mjenzi (KES 120,000 / month) - departments and multiple locations.
- Mbunifu (KES 350,000 / month) - an enterprise operating rhythm.
- Mbunifu Huru (scoped) - a high-control or sovereign deployment, quoted after a scope conversation.

Final workflow coverage, limits, support, integrations, and deployment terms are written in your order form or contract.

05

Human authority stays with you

Jueni Biashara AI prepares and organises; your authorised people approve money, tax, contracts, staff decisions, and anything published or sent outside the business. Because every step keeps its source and its owner, a mistake is visible and traceable, not buried.

06

What it is not

It is not an autonomous decision-maker, not a guarantee of revenue or savings, and not a replacement for your accountant, lawyer, or judgement. It makes the working day easier to understand, run, improve, and trust - without hiding responsibility behind software.
